

1. Today I worked on what are all the changes I couldn't made on previous day. So I started working on label tag like city, zip code should on the top of the input field. Then label expiry month, expiry year and security code should also come on the top of the input field. So I used label tag by calling in the css then the label name gets on the top of the input field.
2. Then I changed the details section font color.
3. Order summary div is aligned as 100% so I changed into the same alignment where the container width is aligned.
4. Worked on heading tag that have some gap on the left side so I used padding-left: 10px.
5. The purchase subscription button should be in the single line. I used the width property in the css section and the button width in changed.
6. Personal details and card details alignment is not in the order. So I used padding-left: 10px in the <h3>tag.
7. Inside the button, the text color is changed to white as color: white;
8. In the button border color is changed to green as border: green;
9. Started working on order summary for 2nd div.
10. 1st and 2nd div are in the same row so I started working on it.
11. I also cleared my doubts with deeptha where she explains me about the div.
12. Searched on <p> tag in w3 schools. Then I have implemented inside the order summary div. After applying <p> tag everything in that div gets changed.
13. Then I started working on the order summary div and planned what are the things should be in the 1st and 2nd row.
14. In the 1st row->selected plan, order total should be included.
15. In the 2nd row->payment method and payment fee should be included.
16. I included lock and secure payment in the 3rd row.
17. After including all these things I run it but the 3rd row alignment is not properly arranged.so I removed the lock and secure payment from the div.
18. At last jayapriya told me some corrections in the order summary div and told me to include icons in the input field.
19. I have tried to include icons in the input field in my home but it doesn't work. First I have downloaded the icon from the material icons in google and stored by creating a new folder in my project as assets.

20. Then I included in my project as ``

21. But the icon is not placed in the input field. So by tomorrow I have to work on order summary div and icons should be in the input field.
