

Today I read the concept about css.what are all the css commands and types of css.

Two types of css:

External css and internal css.

I read and practiced on background,borders,margin,padding,text,font,etc.Then I created a webpage which contains saree,shirt and elegant dress with price and image.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Textile Shop</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 0;
      padding: 0;
      background-color: #f8f8f8;
    }
    header {
      background-color: #8B0000;
      color: white;
      text-align: center;
      padding: 15px;
      font-size: 24px;
    }
    .container {
      display: flex;
      flex-wrap: wrap;
      justify-content: center;
      padding: 20px;
    }
    .product {
      background-color: white;
      border: 1px solid #ddd;
      border-radius: 5px;
      margin: 10px;
      padding: 15px;
      width: 250px;
      text-align: center;
      box-shadow: 2px 2px 10px rgba(0, 0, 0, 0.1);
    }
    .product img {
      width: 100%;
      border-radius: 5px;
    }
    footer {
      background-color: #8B0000;
      color: white;
      text-align: center;
      padding: 10px;
      position: fixed;
      width: 100%;
      bottom: 0;
    }
  </style>
</head>
<body>
```

```

<header>Welcome to Our Textile Shop</header>
<div class="container">
  <div class="product">
    
    <h3>Beautiful Saree</h3>
    <p>Price: $50</p>
  </div>
  <div class="product">
    
    <h3>Men's Shirt</h3>
    <p>Price: $30</p>
  </div>
  <div class="product">
    
    <h3>Elegant Dress</h3>
    <p>Price: $70</p>
  </div>
</div>
<footer>&copy; 2025 Textile Shop. All Rights Reserved.</footer>
</body>
</html>

```

I created internal css where both the html and css file are coded in same file. The background colour and font of the body tag is called under the style tag;

Then I have created a div class named container and for products I have created three div class named as products. under the div class I mentioned image to be displayed in each box and font using header tag;

In the style tag I have called each div class and given padding, background color, margin, text alignment, border, border radius.

Then I have saved the file name as textile.html and run the program. it displays a webpage using flex with the specified alignments.
