

Today I went to the class by 3.30 pm due to my personal work. I started working on my project. In my project priya told me some changes to do. So I started working on it. **Following are the changes today I made on my project:**

In my project personal details and card details should align in the same line where the payment method is aligned. For this I need to reduce the width. Here I used the property width: 50% in the container field in css.

Then the webpage should be in the center so I used justify-content: center; in the body field in css.

To align the personal details and card details into the center of the container that is to divide the details into two half I used width property and assigned as 30% in both the sections.

In the order summary section priya told me to create a div tag for the whole div.so I created a new div and closed it by </div>

After creating the div my whole order summary gets collapsed then I freshly started inputting the tags for the order summary.

Then I give background color: white for the div and changed the width of the order summary as 70% so that each div where aligned in the same order.

Priya told to change the font in the label part, so I changed in the label section in css as font-family: sans-serif.

The above are the changes that I made today.

Some of the changes I tried but it doesn't work are as follows:

In the details section name of the label should come in the top left corner of the input field. I tried by changing its padding but doesn't work and I tried by giving the label attribute in the html page it also doesn't work.

I searched for the order summary border style in google docs but there isn't available the kind of border I am looking for.

In the order summary div the <h3 > should come in the left side of the container and the button should come in the right side of the container so I used flex box properties where justify-content: flex-start and justify-content: flex-end in the order summary div but it doesn't work.

These are all the things I tried to change but doesn't work so tomorrow I have to ask doubts with priya.
